[3] Minimum (up to 5 concurrent users), Recommended (up to 25 concurrent users)
* Minimums for servers are appropriate for 5 or fewer concurrent users.
* Minimums for services server are appropriate for up to 2 clients with 5 or fewer concurrent users.

Ideal Configuration

- File Server and Services Server on same host
- Lucity Citizen Portal and/or Lucity Citizen Portal REST API on a server within a DMZ (for best security and to provide access to private citizens)
- Use Lucity REST API with SSL (for security) as it uses basic authentication
- Lucity Mobile Server should use SSL. It is not secure to deploy Lucity Mobile Server without SSL.
- Avoid same host for Services Server and Web Server (for performance)
- Lucity Identity Server is a required component for Lucity Web and Lucity Mobile Server. It is recommended to install Lucity Identity Server only once on any server hosting Lucity Mobile Server or Lucity Web. The Lucity Identity Server installation is automatically launched upon the completion of the Lucity Web and Lucity Mobile Server installs.

These recommendations are based on the simplest configuration with the best performance for a standard client and may not be appropriate for all clients. It's possible to put all software on one host if the server has enough drive space to satisfy all applications. It's also possible to use different hosts to meet all server requirements.

Android Tablet Recommendations

- Resolutions of 720 and greater are recommended. Lucity form designs are shared between the tablet and the web. Tablets smaller than 720 will require frequent scrolling right to left on the screen to see the full width of the form in landscape mode. A display of 960dp by 720dp will effectively show most Lucity forms in both landscape and portrait with minimal side to side scrolling.
- The quality of end user's experience will be directly proportional to the quality of tablet purchased.
